General Comment

Generative Artificial Intelligence has been nothing but harmful since it's inception and it's honestly flabbergasting that it's gotten to this point. This proposition is theft, plain and simple. The only way that this model can exist is by stealing other's content and information. Not only is this a flagrant disregard to privacy, but is blatantly illegal and should be considered as such.

As a creative, my livelihood is in direct peril. Using my properties and ideas without my consent is copyright theft. If AI can just circumvent that, then what is the point? In fact, why is it that they need to take anything and everything in order to work? It is because they are a farce. The only reason that these AI models exist is to steal and profit off of individuals, plain and simple. They are fully aware that what they are doing should be, and is, illegal, which is precisely why they want those walls torn down.

Frankly, if anything, allowing such criminal behavior to exist will certainly spell disaster. There is no future for them. No one is asking for them. The only ones recommending them are corporate suits that stand to make or lose a profit on them. I have no doubt that allowing these models to wantonly leech off of literally everyone is a bad idea. Mark my words: enabling this will be disastrous to so many individuals and collectives, and everyone will know who to blame when the bubble bursts.
