General Comment

AI does not & should not have a future in the United States - the energy costs are disastrous for our grid & natural resources. That alone should be enough -- it is simply not sustainable. Additionally, it would destroy the creative economy, and with it all the good, hard-working Americans with brilliant contributions to make to our society. All the creative enterprises that this nation is known for, from cinematic masterpieces to the "next great American novel" -- gone, mashed into a bland paste. It also has DANGEROUS results -- books about how to correctly identify edible plants written by AI have been printed with incorrect information with near-fatal results. This is the first of many potential lawsuits waiting to happen in the wake of AI-generated slop.

AI also paves the way for an oversaturated market, which would have disastrous results for our economy -- least of which is losing our foothold as a creative, innovative power-house. If anyone can press a button and get a similar product, it can also be printed & sold, and compete. How is anyone, including corporations with intellectual properties to protect, supposed to retain copyright protections or compete in such a market? Eventually, the only companies that will be able to compete at all will be those driven by human artists -- the extra time it takes to produce the art by hand is less the manual labor, and more due to the deliberate intention, research, attention to detail, and inspiration it takes to make products that resonate with a wide audience.

As a highly successful artist that creates wholly original content by hand and has made millions for corporations & big box stores without the assistance of AI, who happily made a typical office worker's wage & was grateful for it, I promise you the affordable, creative powerhouses you seek are already present en masse in highly trained, specialized human beings and is FAR more worth the investment than any flash-in-the-pan technology ever will be. Put creativity back into the hands of the American people before America loses the sparkle that truly makes it great.
