Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2884

Comment on FR Doc # 2025-02305

Submitter Information

Name: Amanda Bumgarner

General Comment

It is morally abhorrent that a machine can scrape from hundreds of thousands of hours of an artists' work and theoretically make millions from that use while the artist gets nothing for it. This property is copyrighted and should not be used by companies without fair compensation. That the program cannot work without scraping from copyrighted works means that the program should not be used.

People should be fairly paid for their work, if it's that important (opt-in, not opt-out, and that option respected). But it isn't that important, because all the programs are doing is spitting out other people's work in different ways, but not in novel or surprising ways. Any sense of novelty or surprise comes from the human element, not the machine. It's a false sense of intelligence. Instead, you've basically created a plagiarism machine and marveled at how human it seems, because it spews out what humans already made.

Over and over, they try to make this work and it continually proves that it's not as good as human ingenuity and that it's overwhelmingly inaccurate. It's a bad product and certainly not worth scrapping copyright law for.
