

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-r4gp-iawo
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2909

Comment on FR Doc # 2025-02305

Submitter Information

Name: Katherine McCallum

General Comment

I am a citizen trained in Electrical Engineering and have relevant expertise on how disastrous a technology AI is. This should be stopped. AI is not the effective tool it is marketed as by tech corporations. Americans are steadily tired of AI being forced onto them and into their lives. Microsoft and Google are both routinely needing to go out of their way to trick consumers into using Copilot and Gemini, going so far as to completely restructure services to make it happen, and the main feedback they're still getting is "How do I turn this off?" By OpenAI's own admission the only way AI can function is by stealing the labor, work, and livelihoods of others without compensation. This is a tool designed to leave Americans unemployed and robbed of their own creations. It does not innovate, only imitate, so the more it is used the stagnant it becomes. Its own model as a (admittedly very complex) Markov Chain leaves it as mathematically and computationally incapable of coming up with a truly new idea. The closest it can possibly do is recognize a solution space that already exists but was never explored, but a human had to create that system in the first place. As such, its implementation can only ever be a drain on productivity. A country that creates nothing new is destined to decay. It is time to acknowledge the Emperor has No Clothes. As a technological professional, AI is snake oil, a parlor trick, an illusion that merely looks real. All this is to say nothing of the environmental and logistical concerns attached to implementing AI, the staggering amount of electricity and water needed.

OpenAI should not be given special access to any data nor immunity from copyright law. If it cannot use others' Intellectual Property without compensation for copyright, that is a flaw of their business model. Let them fold. It is unacceptable to start a business with the stated and deliberate intention of theft in violation of the law with the desire to change the law for special treatment in that theft.
