Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2910

Comment on FR Doc # 2025-02305

Submitter Information

Name: Zoe Smith-Stoe

General Comment

As an artist in an industry which relies on a consistent and well protected copyright system to survive, My livelihood is threatened by these "Artificial Intelligence" companies. Companies like OpenAI, Microsoft, Google, Meta, and X are trying to replace industry jobs using technologies that require mass illegal misuse of copyrighted material to operate. No matter what executive orders are in place under this administration, the foundation of private property rights to which this country was built around would be rendered useless if private entities are allowed to take and use copyrighted works without permission of the copyright holders. If these "Artificial Intelligence" technologies are of such high national security importance that our laws must be violated to run them, why are these technologies in private hands? There are other circumstances in which property rights have to be taken away for the betterment of the public good, but those are procedures ran by public institutions which are supposed to be accountable to the people of this country. If OpenAI's theft of data is of such national security importance to protect, why is that data in the hands of an organization which falls under no government national security body? If the country suddenly had a massive industry of criminal thieves, should we make thievery legal to grow that budding industry? I personally don't think so. Thank you for your time.
