Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2923

Comment on FR Doc # 2025-02305

Submitter Information

Name: Samuel

Mathias

General Comment

I am Samuel Mathias, a concerned individual citizen providing comment on the AI action plan. I will include the text requested by the wording on this webpage below.

“This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be reused by the government in developing the AI Action Plan and associated documents without attribution.”

I believe that removing regulations on AI in the realms of power and material consumption is unnecessary and destructive. Current consumption of power and material for AI data centers and the use of generative AI have already shown to negatively affect the public's access to necessary power use and the availability of consumer goods. Even within current guidelines, the overconsumption of power has caused several grids to become less reliable, so removing current regulation would only cause further issues. More regulations and requirements to isolate from existing and necessary grids should be in place, as well as associating the higher energy costs with renewable resources.

I also believe that the AI data gathering process should be more restrictive than it currently is, as it is a threat to personal privacy and personal property of individuals and businesses. There should be further regulation focused around the protection of intellectual property and personal information, and AI systems should only have the ability to gather voluntarily submitted data. Allowing the scrapping of public data from websites and social media platforms is a security risk and should not be permitted.

I do not believe the use of AI as it is currently popularized is beneficial to the general public in any way. An entirely new system would need to be created with clear and publicly stated protections and goals that directly show the benefit to the general public.
