## General Comment

If OpenAI is allowed unfettered ability to infringe on copyrighted material, it will open a can of worms into intellectual property theft on a MASSIVE scale by both companies AND individuals. A scale at which will bankrupt multiple industries this country, and the world, thrives on. If you give one AI company carte blanche to override the rights of copyright holders, you give ALL AI companies that same carte blanche. And with unlimited ability to steal means they will hit any and ALL companies and agencies worldwide. Open AI would be stealing from other companies at a rate that would shut down major industries for entertainment, healthcare, pharmaceuticals, legal work, and technology, and many many more. Time and time again the technology for Ai has proved itself to be based upon bad faith. Look no further than Open AI's own CEO admitting it's entire basis upon existing is to steal and that in order for it to continue to be a sustainable business it MUST steal. And steal it will; from creators, from organizations, and very likely next, our own government. Every industry must follow the law, so why should exceptions to the law be given to the AI industry that ALREADY in many cases infringes on those laws? Individuals are not given exceptions to infringe on copyright against industry titans, so why should an AI firm?

What's more is that experts in the AI field admit that at present, AI and generative content made from it is the WORST it'll ever be. Why would you allow a flawed and easily corruptable product, made as a short term fad from people from Silicon Valley, to skirt laws and principles that long-established titans in the entertainment industry are not allowed to override. If OpenAI is allowed free reign of all content, it will result in endless, bankrupting legal wars between it and all other media giants. Lastly, OpenAI and all other AI companies in the US aren't truly interested in getting technological superiority over China and other adversaries, they only want to fleece both the American public, businesses, and the US government for all their worth. There will come a time, with or without giving OpenAI the ability to defy copyright law, where AI technology will not simply be unprofitable, but will COST anyone and everyone who implements the technology.
