General Comment

AI right now is a dementia riddled forgetful mess that can't help giving wrong information. It's not just wrong in most of what it says but it's actively unhelpful as if I were to ask AI without guardrails to generate me information it will pull that information from thin air, even going so far as to fake its own sources. Anything that cannot find legitimate information but gives you an answer and justification anyway has no place being publicly available nor should it have access to public resources. It is a tool with a vanishingly small scope, that is if a learning model has a few hundred pages to draw from in its history is asked to make summaries it might be able to be accurate, but widespread and publicly trained AI needs heavy guardrails in order to even be useful at all, let alone supported.
