Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-rej0-4ocg
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2943

Comment on FR Doc # 2025-02305

Submitter Information

Name: Sarah Esterman

General Comment

As both an artist and a medical professional, I believe it is critical that the development of generative AI and LLM learning be heavily scrutinized and regulated before it is given any further priority. The unrestricted use of copyrighted material for training of these models shows a flagrant disregard for existing copyright law, and should not have been allowed to progress as far as it already has. The financial losses to both individuals and businesses will only continue to compound if this technology is allowed to proceed on its current trajectory, and risks the prospect of losing intellectual properties entirely.

In return for these significant detriments, there are no benefits. The well documented environmental costs, degradation of artistic works, hallucination of completely incorrect information, and general loss of integrity caused by reliance on generative AI models serves no one, and certainly does not serve the citizens of the United States.

I am not against artificial intelligence. I work in a part of the medical field that makes heavy use of artificial intelligence; it makes my life easier, and is critical to advances in many of our diagnostic services, early detection, and accessibility of medical testing. I am however against LLMs use as it is currently progressing. It regularly provides medical information which is not only utterly incorrect, but with the way many Americans now cite sources like OpenAI as a factual authority, can quite literally life-threatening.

This technology urgently needs more regulation, not less.
