General Comment

It is of my opinion that this avaricious chase for AI is ultimately what will doom our entire nation. This rapacious need for infinite growth is primarily in service to the 1% and 5% of the nation. The flattery that this tech will make, "everyone's" life better is flimsy at best. Is this tech going to be free? Will the common people be able to open up their phone and not be expected to pay a fee to use this marvelous technology? What of the people who's jobs are eliminated once this tech is far more widespread? We've already seen how trigger happy people in charge have been by ordering mass layoffs at the governmental level, and AI isn't even all that well integrated. What kind of devastation lies when that kind of power trickles down to the common people? As I see it, this tech is largely meant as a means to offload authority. Give authority to machines, whilst the people that built them get to sit back and take the credit. It's a deeply un-American idea and actively goes against the idea that we, the people are truly in charge of the nation. It actively assaults the ability to pursue happiness, and it bleeds out middle class folk who will all likely be forced into poverty. There are certainly benefits to sections of AI; a common usage is for tracking the path of cancers and potentially diseases early on in detection. But this whole GenAI, and the alleged, "AGI" revolution is largely a bust. I fear continuing pursuit will at best eliminate American freedoms, and at worst will cause another depression. A Great Depression beyond which we can barely fathom how much damage it will cause. A financial disaster of global proportions.
