General Comment

I see AI as an overhyped product similar to what Silicon Valley talked about with VR and the Metaverse, all failures in their own right as they try to get more investment through hype and false promises. Too much money has been put into a product that can only generate bad art and worse personal assistants. Chinese companies can make a cheaper AI that operates at the same, or even better, level than American ones. There can be some good for AI in the scientific sector, but since OpenAI and other businesses focus on using it for the most ridiculous products and even dystopian ideas, AI needs to be restricted for the public good. OpenAI and other AI tech companies have constantly stole copyrighted materials and flouting copyright law to fuel their own profits. Even then, as shown with various studies, AI will become less intelligent as they scrape more and more information from other AI products, therefore making the whole ordeal pointless. As a citizen, I cannot agree with such request for these reasons alone.
