As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-rsmv-dcde
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2995
Comment on FR Doc # 2025-02305

Submitter Information

Name: Arthur Cannon

General Comment

Large-data AI models are presently incompetent for the roles they are advertised to fill. Industry leaders promise that they will be, soon, and that they need just a bit more data to achieve this. They said this last generation, and the generation before, and the generation before; and each time they get what they ask, their models arrived late, overbudget, and only slightly-less-incompetent. Now, they seek sweeping changes to our national laws which presently push our population to pursue excellence by securing for us the fruits of our success. Now, they seek excuses to snatch these fruits for and then with their incompetence engines. Worse, the only ways they can sell their services is as and for junior knowledge workers, who need employment experience to grow into senior knowledge workers. On its current trajectory, large-data AI models are not, will not soon, and may never be remotely capable of serving as senior knowledge workers, but these incompetence engines will still cut off our supply of real senior knowledge workers.

For decades, we as a nation have trained the best knowledge workers the world has ever seen, and then we have cast them out of our country. Now, large-data AI models will cede even that to both our long-standing foes and what friends we now antagonize. If we wish to twist our laws--our fundamental principles!--to the purpose of feeding these large, expensive, unprofitable toys, we can only expect to find ourselves become spoiled children on the world stage.
