General Comment

Generative A.I is not America's future. Generative A.I does not generate wealth. Generative A.I only steals from people. Think about it; taking creative jobs from American people takes away money from the economy. The creative industry is one of our most economically dominating productions in the entire world. Without artists, voice actors, etc etc, their money vanishes from our world. Even if A.I produces, there will be less consumers and therefor less economic growth.

Even despite that, A.I's energy usage is far too high and unsustainable.

And even despite *THAT* A.I is wildly unpopular with the populace. Lawsuits have been filed and won against A.I and their theft of copyrighted materials. This should be no different.

Generative A.I has no place in America's future. There are A.I programs that do, but the ones specifically requesting the free use of copyright material has no place in American culture and in the world. We led the entertainment industry into a golden age and this alone will destroy it.
