

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-s898-gzrx
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3057

Comment on FR Doc # 2025-02305

Submitter Information

Name: Kristopher Smith

General Comment

I vehemently oppose the ability for anyone developing AI to have carte blanche free reign to train on anyone's data in abeyance of copyright or any other laws. As a creative, I've seen too many people's work stolen and regurgitated through large language models; something we need to protect as the current laws should be doing, rather than stripping away their basic rights on art work to be used without compensation. Nor do I want to see an AI company able to use private information and be free of any consequences if such information is used improperly.

Safety nets need to this technology do need to exist. It is currently used far too much for the low level of understanding of it's users, and being used to the detriment of the people that generated the data it has been trained on. Giving all the power to AI corporations to do what they want will lead to lower overall quality of written, artistic, or any other media generated because it will replace the actual creative forces it was created on with no ability to go beyond kitbashing the original works together. Removing all rights to the original creators and ignoring such laws and rights we have now won't make the USA better, just more efficient and generating a poor product.
