General Comment

Hello, I do not agree with going forward with the development of artificial intelligence plan. It removes jobs from hardworking people and takes away the right and identity of many individuals.

It is argued that so many things could be done by a computer, but there is a reason that it is done by a person. It gives that person a job. It gives them an income.

By removing the boundaries that punish AI and the companies that run them for copyright infringement, so many people's livelihood would be lost. Artists and creators of all forms would no longer have a guaranteed source of income as their industry is overflowed with senseless, lifeless, things and no one is able to tell the difference.

I do not understand how anyone could think AI would ultimately benefit anyone except the ones that make money off of it. It is a crutch and supporting it would be against everything that I have worked for.
