General Comment

Artificial intelligence should not be allowed to proceed further without heavy regulation from the government. The ramifications of the technology have already proven to be dangerous in various sectors and fields, including but not limited to:

- Harming artists/creatives, worsening their already pitiful source of income by allowing both malicious and ignorant parties to easily steal work that was unknowingly and, without permission, used to train AI.
- Uses the work and ideas of others with no credit nor compensation nor permission.
- Allowing anyone to create spam on social media and YouTube with minimal effort in the form of bots with more convincing conversational skills, and content farms made for either profit or harming audiences with misinformation.
- Allowing students, employees, and employers to cheat and half-ass their work by typing in a text and/or image prompt, harming both the individual and end user.
- Harming the electrical grid by draining excessive amounts of power that may cause frequent brownouts, damaging sensitive equipment.
- Causing further damage to the environment by using excessive power and water for cooling data centers.

AI may be negatively used in other sectors that haven't been affected drastically yet, such as finance, transportation, etc. I do not see a future where AI can be used in positive and unarmful ways for the American people. The technology is running rampant without penalty, damaging multiple sectors and everyone who comes across it. It is producing meaningless overhyped content.

At the very least I highly recommend that AI be HEAVILY regulated, only allowing the technology to use content that has explicit permission from every and all authors/owners of said content to be used in the technology's datasets, with the default permissions set to decline.
