General Comment

Generative AI and the AI industry both in our country and the world at large seek to undermine American values and exploit American workers.

Generative AI grossly misuses natural resources, including large quantities of valuable electricity and water that would be put to much better use serving the American public. The AI industry is unprofitable and has been steadily costing much more money for years than it has any hope of ever earning.

Generative AI specifically and the AI industry as a whole are profoundly un-American and seek to flagrantly violate any and all copyright law to "improve" their algorithms. If the federal government truly seeks to allow AI companies and private corporations to act above the law, it makes this citizen wonder how much the administration is directly benefitting from doing so.
