General Comment

The idea of allowing AI to be immune to and not subject to the same copyright laws that humans are subject to is extremely shortsighted and ultimately destructive. If this rule passes, then we would see any sort of artwork, any sort of intellectual property, from small independent artists, to large corporations would be swept up into this massive, zero-actual-intelligence matrix that provides no actual insight but just randomly regurgitates prompts with no concept of what or why it's actually doing. Whereas, all art, even from well-known, famous IP's like Disney, Marvel, Star Wars, Nintendo etc. could be swept up in the same wide net. What guardrails would be put in place for artists to opt out of this? Or better, what processes would be put in place to opt in? If this is just a wide, sweeping decision that is being foisted onto any artwork, then where is the choice of the artist in how their art is used, represented or monetized?

I respectfully disagree with the idea of implementing this change and I urge against this change in the interest of the choice of the artists, big and small, who would be impacted by this decision.
