## General Comment

It is a matter of public interest, to individuals and small businesses, to limit how generative artificial intelligence can be used. It should not be legal to replace workers with generating artificial intelligence. This only hurts the American trust in our businesses.

We have seen an increase in businesses replacing Human Resources with artificial intelligence, which prevents skilled individuals with proven merit from being able to get jobs.

Fraudulent videos are now readily able to be produced that can falsely depict events that did not happen

To bring back the public trust in our businesses and job market, we need to enforce limits on how companies can use this technology in ways that harm all of us.
