Name: Anonymous Anonymous

General Comment

If anything more restrictions are needed on AI. It has been around for some time without the law being able to catch up to it fully and has been a part of cases big and small that continue to set precedents on it. While AI might be a part of the future it should not be freely done, on a more ethical note it takes jobs from other people and it limits the need for critical thinking skills and expertise from people and ultimately can lead to a lot of bad outcomes without anyone checking it. If you don't believe me then you can search up when AI was used to try and find breast cancer and instead identified cancer by the photos logos, if no one was there to have the already existing expertise it's very possible no one would have caught that and many people would get false negatives. Yes laws inhibit the speed of AI but that isn't a bad thing, we as a country have low STEM scores, degree levels, reading levels, career opportunities so let's at least try to push Americans forward before we cut humans out of the equation
