General Comment

We cannot allow any generative AI model to be “trained” on property that belongs to others. AI should not be allowed to run rampant and steal from any source it can gain access to. This would be blatantly stealing from the creators and artists of America as well as from those around the world. A person or entity utilizing the content made by others without their consent or even awareness to create a “new” product would be widely accepted as unethical and corrupt, yet it’s being proposed that generative AI be allowed to do essentially that. It’s clear by what generative AI has produced in these recent years that it is overall detrimental to the public availability of information on the internet and, in turn, the American people. It mass-produces near worthless imagery that floods image search engines and has had a massive hand in contributing to the rampant spread of misinformation. I have witnessed firsthand this rising tide of misinformation and the alarming amount of people, on multiple social media platforms, who believe without second thought that AI generated content is real. Out of concern for the world we are curating by allowing this to happen without regulation, I beg that we please reconsider granting generative AI and those who own these models the power to take whatever they please without consequence. This technology must be regulated and the rights of Americans must be put above the rights of AI.
