As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-t178-3qn3
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3180

Comment on FR Doc # 2025-02305

Submitter Information

Name: Vincent Gianakos

General Comment

I urge you to think about the consequences and what will happen years down the line if copyrighted works/data/materials are allowed to be used without a proper license for training generative AI systems. Besides the point that they will be used without a license for "learning processes", the output of these systems are almost never an inventive combination of learned abilities. Sometimes the outputs are piecemeal amalgamations of source materials, but most commonly they are over-fitted copycats of source materials the AI system was trained on.

Allowing generative AI to be trained with copyrighted material creates multiple loopholes against the favor of copyright holders because it can produce near replicas of its inputs if prompted/queried in very specific ways. It is encouraging plagiarism to say that if the process to achieve a generated output is obfuscated enough, it's OK for it to nearly identically match some input. In fact, this won't even be about AI anymore if the claim can be made that something came from AI but is really just plagiarized without it.
