As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-t27s-eznh
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3182

Comment on FR Doc # 2025-02305

Submitter Information

Name: Tim Laster

General Comment

To put it simply: What is currently called AI is only an algorithm that takes massive amounts of computing power and wastes too much electricity. AI, especially when it comes to image generation, can and should be considered copyright infringement on all whose works went into the model for these AI algorithms. It is my opinion that image and animation based AI be controlled by copyright at the least and removed if at all possible.

As for text-based AI, I believe there is some use to it, however, it should be more specific than an end-all-be-all chat bot like Chat GPT tries to be. Uses like checking coding or summarizing large texts is valuable. However, proper creative writing easily escapes AI far too often and it takes more than an algorithm to create proper narrative, and so creative writing AI should be treated the same as image AI: controlled by copyright or removed.
