General Comment

The privacy and intellectual property rights of private citizens must be of utmost importance regarding AI policy. Already, we have seen that AI companies have little regard for copyright protections, harvesting mass amounts of copyrighted work (e.g. writing, artwork, etc) from the internet to develop their models without any permission from the owners of said works, thus directly profiting off their work.

Additionally, mass amounts of personal data and information are harvested by tech corporations to be sold off to advertisers or other 3rd parties; for AI companies to do the same would be a similarly massive breach of privacy for the American public. Already we have seen propositions to use AI to predict human behavior: who is best to let out of jail and who should stay, who should be deported for their potential to commit future crimes, who should be hired and who should be fired. Such uses are incredibly inappropriate to downright dangerous: a computer program with zero accountability should not be trusted to make potentially life-altering decisions regarding our lives.

President Trump's executive order makes it clear that this administration prioritizes the profit of tech corporations above the safety and security of the American people. Removing safeguards to AI development will not make us safer; it will only lead to increased surveillance and give us less control over our own lives. I am wholeheartedly opposed to the idea.
