Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3201

Comment on FR Doc # 2025-02305

Submitter Information

Name: Nick Azevedo

General Comment

While I believe artificial intelligence has its place in America's future, it is being used to destroy creativity and fill the world with bleak, fake "art" that has the intention of taking tens of thousands of jobs in various fields, putting many out of work. For people like me who has always wanted to be an artist and for many like me who have spent thousands of hours to hone our skills, it would be devastating. Artists already struggle to find work in this day in age and with the cost of living continuing to increase, allowing organizations like OpenAI to just have infinite resources and zero accountability for their actions is a slap in the face of the millions of us who wanted to try and make the world a better, brighter place. Artificial intelligence should be used to advance medical science, it should be used to make menial tasks easier, but it should never, ever replace the imagination of the human mind.

I am writing this because I am firmly against this plan, the private sector already gets away with too much and I cannot stay silent while millions of people struggle. Only a few will benefit from this action, making the private sector richer as they destroy livelihoods with zero remorse, so many people are already out of work and struggling to find jobs, the advancement of Artificial Intelligence with the purpose of replacing individuals will only make this struggle much, much worse. I implore the regulators to understand how much this will affect people's lives because I fear it will only be used to make people's lives more miserable than it already is.
