General Comment

Hello, I am a college student who has commissioned art before, and I just saw this notice. I do not think this work is ethical. Artists have a right to their work just as much as other craftsmen. If their work is replicated, it normally takes a human to build up the skill to do so. AI is not the same. I believe artists should have the right to sell or opt their work in for AI training. Does this not impede on copyright laws? Should artists not have the right to patent their work, which took them years to develop the skills for? Even if a machine takes also takes time to learn from these photos, they can mass produce the work much quicker than a human. Yes, it is much more efficient, and very appealing, but it steals jobs from us. The originality which sets us apart from each other is being erased. This is monopolizing our work and it isn't right. Even manufacturers have patents, why can't we have the same protections? Everyone has to build up their business in some way; this is hurting free enterprise. This is what I believe. Thank you for your time.
