General Comment

As a freelance artist and U.S. citizen I have seen the dangers of unregulated AI used in such a short amount of time. These dangers not only affect artists, writers, and other creatives but regular private citizens as well. People have long used social media and written on the internet and now their data and private images are at risk of being fed into algorithms which can be weaponized against anyone.

There is an ethical dilemma which arises from AI training, but also an environmental impact too. These models go against a persons copyright and ownership of their own work. We have seen the harm AI has created from deepfakes to mimicking voices and videos of living people. Scamming and crime will only increase as these models are allowed to steal unchecked. Individuals safety should not be put at risk for corporations gain.
