General Comment

As a life long artist, I want to say that AI has no place in the future of this country. It is not an “art”, or even creative. It uses massive amounts of energy for each and every single image. Images stolen from artists and creators across all socio economic backgrounds. In seconds it spits out a rubbery image, with no compensation or credit to the creatives it steals from, and no consequences for the destructive use of water and energy, on the environment.

As AI becomes more and more entrenched, you will see the quality of images become even worse than they already are. There is no feeling, no soul, no creativity in these hollow images. And as they get worse, true creatives will suffer and start giving up as they cannot compete with these fake images, and people falling for them will know less and less about what is truly wonderful and engaging about true art, as our environment pays the price as well.
