Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3253

Comment on FR Doc # 2025-02305

Submitter Information

Name: Preston Ford

General Comment

I see the usage of AI having equal potential for great benefit and great harm to both the economy and society. My main concern is on behalf of the Arts, the Humanities, and the Culture of the United States of America. We as a nation have unprecedented cultural accessibility, spread, and ability to create as a whole. To me, the goal of Artificial Intelligence companies is first and foremost to undermine the power of the Arts and Humanities in our society, in favor of their services for long-term profit and a steady cash source from consumers. AI should not have any access to existing works of art without express permission given, via E-mail, Fax, or in Writing, to the party interested in using the work or training. I see the utmost need for power being in the hands of creatives experienced or not; everybody has the ability to produce art and should be protected as such!

There are naturally some confines and grey areas to this, such as the range of permissions. I feel that artists should be able to "bulk sign" the use of existing works if they want to, or just individually allow artificial intelligence access if that is their wish. I don't feel there should be any implication that agreements include future works unless explicitly understood as such by the author/artist. Of utmost concern to me is the accountability and transparency of AI companies; requiring signing agreements for training would create databases of artists and works being used. These works could then be officially attributed by AI companies on their websites or other forms of demonstrating their work, upon user request. Justice for the Arts and Humanities of our Nation is the highest priority when they are under threat like never before, by technology that does not care if humans create or perish, so long as it has more data to feed on forevermore.
