General Comment

Hello;

I am writing to voice that AI should not be given access to material the owner does not own via the Information on the Development of an Artificial Intelligence (AI) Action Plan.

Many companies such as Google, Apple, and Amazon already are training AI via voice, written works, or images, without proper consumer consent. A massive invasion of privacy. The mass rejection of AI tools is not only suggested by creatives across the board, but also the general public. If you search for programs such as Gemini, one of the first options will be in search results, "How do I turn off(---). And multiple variations of said description.

US citizens should be able to go about their lives without feeding into machines, especially without proper consent.

If a business that relies on others' creations in order to survive, that is not a business.
It is a scam. And we should be treating it as such.
