General Comment

There is absolutely no reason why Generative AI should be exempt from this copyright rule, especially given that it uses the material to amalgamate barely passable products. Generative AI does not come to conclusions based on the information it steals, it can only regurgitate. Generative AI does not create. Generative AI does not have imagination. It can only take. The use of Generative AI to circumvent copyrighted material should be considered a felony as much as large scale piracy.
