General Comment

Good day to you!

I wanted to reach out and ask you to consider a logical and moral fallacy of cutting down regulations to further innovation in AI in competition with countries such as China.

To my knowledge, Google and OpenAI wish to train their models on intellectual property and other data not under their ownership; ergo, scraping from people regardless of their consent or not.

Is this not a violation of United States Copyright law? And a bare-faced one at that? Some random YouTuber under 500 subscribers can get copyright struck for including a half-second clip from a Warner Brothers movie, but two of the largest tech companies of today can leech off of people's creative work (of which those people sacrifice a lot of time, energy, and in several cases money to craft) and train their AI on them with intent to replace human effort for lower costs and newer heights at the expense of the livelihoods of the artists they scrape with no fear of repercussions?

If such is allowed, then piracy is an endeavor that need not be a crime. What is the point of copyright if intellectual property can be used to train a robot to replace it whether the owner of said property is on board with such or not?

I do not presume that any of this might sway you completely, however, I hold a tiny bit of hope that you might take what I said into consideration. At least, some of it. So many people are done with the absurd medical expenses and student loan debt, the broken education system, the rapidly rising rent prices and cost of living, and so much more. By giving the green light, you will not only alienate artists and other creatives but also many ordinary people whose personal photos and other information will be used without permission for tech that can and has been used for malicious purposes before. Eventually, their patience will run dryer than the Atacama. The first stone will be thrown, and the gates will fly open and right off their hinges. And nothing will put them back on.

Please make the right decision. Don't handicap the people even more.
