

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-tu3r-rr2j
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3307

Comment on FR Doc # 2025-02305

Submitter Information

Name: Max Fortna

General Comment

Loosening restrictions on the privacy of data used to train AI models is a direct threat to both global brand integrity and security. No matter what restrictions are placed onto an AI model the inherent black box nature of its processing leads to many potential breaches into sensitive data the model might store. The only way to secure data used by an AI model is to not let it access it in the first place. Even less sensitive data like branding allows the potential of damaging the brand identity without consequences due to the muddy nature of ownership of AI generated material. The best way to ensure the security and integrity of private and copyrighted data is restricting the access of AI models to that data. Any policy allowing such data to be processed for machine learning processes may lead to more powerful AI but that power will certainly be used to expose and devalue the data the AI was trained with. China already seeks to devalue many American brands and products by making cheap knock offs, let's not make it easier for them to continue that.
