General Comment

AI is an overhyped, underdelivering scam in the vein of cryptocurrency and NFTs. Companies like OpenAI try to turn a profit by fleecing an under-informed public with impossible promises they cannot deliver. It's the Dot Com Bubble all over again.

And have we learned nothing from Nortel? Nvidia's downfall of over half a trillion in market cap in a single day, breaking records in the process, shows just what a speculative bubble AI is! OpenAI has still yet to turn a profit and isn't projected to for years!

By giving companies like OpenAI access to data they do not own, we hand them the keys to thieving from every hard-working American and corporation. Livelihoods are at stake if this goes through. If they cannot sustain themselves without theft, they should not stand. Plus: AI companies become the mother of all data security risks by consolidating data like this, and you cannot hope to keep all the grubby hands out of that honeypot.

Copyright exists to protect individual interests, to violate it and remove its protection is to freeze the free market. We should not make the act of sharing in the public Internet a mistake! Even due compensation will not justify this, and how do you compensate the God-knows-how-many artists used to generate images?
