General Comment

As a burgeoning artist developing her skills, I do not believe generative AI has any benefit to the future of America:

Even if it has any short term benefits, the long term consequences on the artist economy, environmental risks, and many other factors that AI is connected to.. The loss would be far more than any manner of gains one might pose as a executive of a company developing this technology.

The loss of morale on part of many people who would lose access to human made art, and have to constantly discern through what is human made and what is made through AI, as well as the endless schlock that would be toothless in terms of content, the element that we have prided ourselves on for centuries would be gone.

I doubt you would admit that is your motivation, but I will say this anyway: Your support of this technology conveys that your goal is undoubtedly the demoralization and hopelessness of humankind, so that other goals you wish to achieve will be achieved faster, at the behest and degradation of everything humanity holds dear.

Do the right thing, and kill the weed known as generative AI technology with prejudice.
