General Comment

I am writing to express a firm rejection of the stated goals of this project. Generative AI, as it is now, operates on theft of IP, and providing special privileges to industry interests is flatly unacceptable. The various Generative AI initiatives have all proven unprofitable and require tremendous resources. It is, in blunt terms, a series of scams targeting the corporate interest in downsizing that cannot deliver, and will cost hundreds their livelihoods as it sucks all value out of the tech sector and beyond.

The reason Gen AI has run up against these "guidelines" time and again is because it is, in now way, valuable. Not to the US, not to its industries, and not even to its competitors. All this initiative will do is devalue art and creative endeavors in both professional and armature contexts. Supposing the outputs of Gen AI are so valuable to bend or nullify the law sight unseen, and they are not, then so too are the inputs: the art and writing of hard-working Americans and our international neighbors. They are so desperate to feed on the work of talented individuals they would demand their permanent devaluation, which will prove more damaging then any value they will ever produce.

Do not provide special protections or privileges to Generative AI initiatives. It is a scam, and as a scam it will promise anything and everything regardless of reality. It cannot help with industry growth or national security any more then a snake oil tonic. If Gen AI cannot develop something of worth playing by the same rules as everybody else, then what good is it?

If we have reached the point that Gen AI demands a magic wand to let them do whatever they want in order to somehow become profitable, then it would appear that the market has already spoken loud and clear on its value. It isn't profitable, never will be, and the kids gloves have to come off at some point. Quit playing around and move on.
