General Comment

Copyright is a cornerstone of intellectual property law. Scrapping copyright protections for tech companies building large language and image generation models creates conditions where certain specific tech companies are given an unfair competitive advantage in the marketplace. Generative machine learning models create direct competitors to existing products out of those very same products. Additionally, generative models can be used to directly reproduce copyrighted materials in their datasets. Artificial intelligence must be forced to obey the same copyright protections every other entity in America is bound by.
