General Comment

While I can understand the potential value of artificial intelligence in many fields, I believe that generative AI which is trained through the theft of copyrighted material and only produces soulless facsimiles of the art it was fed has no place in America's future.

Generative AI sits atop a bubble that has consumed hundreds of billions of dollars with nothing to show for it. If the only way for this industry to be profitable is for it to be given a blank check to steal whatever media they want for training data then there is no point this industry existing in the first place.
