General Comment

I can genuinely only call this presented potential order repulsive and shameful to the American people. It would give massive corporations a free pass to further exploit the creative workers of this country they have already admitted they scraped data and works from to make their mass plagiarism machines (known as Generative AI.) As an American that has worked in a creative field for years now, this will cause irreparable harm to Americans by enabling a cheap market substitute that relies on the works of those same Americans to exist, as well as millions of creatives globally. These corporations are in the process of losing multiple lawsuits for their own failure to respect copyright laws in training the models these generative AI systems are based on.

If this order is made into law, it will be another nail in the coffin that this administration, and this government as a whole, have given up on pretending they care for the well-being and livelihood of their constituents. The destruction of creative industries, and many more industries to follow, will be easily traced back to this order and those like it.

I will personally be watching closely as this order is assessed. Anyone that votes to approve this into law is someone I never want to give my vote or support again if I can help it. And I will make sure my fellow colleagues know who does, and does not, have our best interest as an industry, so they can vote accordingly as well.
