General Comment

Chasing the AI hype honestly seems like another wasteful use of taxpayer dollars and government resources, since the only current use of generative AI is to scrape from existing (usually copyrighted) material and generate output using that material as a basis. It does not have a place anywhere near the arts, as it will inevitably run up against legal troubles when copyright holders realize that generated material has been trained on their original works, and additionally this is going to discourage artists of all types (visual, musical, theatrical, etc) from producing art in the United States. Hollywood has been a great cultural force in the world, and encouraging the use of generative AI may stifle Hollywood creativity and leave a vacuum for other countries to fill. Do not waste any more government resources on chasing the generative AI bubble, and better yet find some way to regulate it.
