## General Comment

I do not believe AI holds a place in the future of the US

AI steals from my livelihood as an American and profits off of theft

AI is overhyped and is fleecing the eyes of the American public.

Recent news articles support this. Google themselves publicly admitted their AI steals IP and cannot generate or think of new content, ergo it's a regurgitation machine -- these are LLM's language learning models. None of this is true AI and it's just legalized IP theft which will irrevocably hurt millions of hardworking Americans who pay taxes and work already in a field the US government has failed to protect from predatory contracts, no rights or benefits but publishers and industries can prevent freelancers - I have watched american publishers sneak in secret predatory non competes and first look options mentioned under language as wanting to rework with an author or musician but instead it's a clause meant to be sat on preventing them to shop work around even if in financial need despite operating as legal freelancers as they are not on salary or benefits.

There has been 0 help from the US govt to already support ip creators/content creators, and this last push is a push to strip that sovereignty and creative control from generations of hardworking americans who have built america's fabric as the preeminent place to be a creator/artist of any kind.
