General Comment

As a computer programmer and government contractor, I heavily believe that training AI on data without consent and proper purchase is theft, and should be considered illegal. The vast amount of data required to train generative AI means that those looking to train one want to be able to freely access intellectual property that is not theirs for their own benefit. The government cannot allow companies trying to develop generative AI free reign to take whatever they want, and must make sure that people who are having their data taken for training are properly compensated.
