As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-ufmu-a9kn
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3393

Comment on FR Doc # 2025-02305

Submitter Information

Name: Brad Arnett

General Comment

I am a firmware engineer in an industry heavily invested in the use of AI. As someone who then directly interacts with AIs on a daily basis, I can definitely see the applications and appeal for their use as a tool on the job. However, like many tools, it can be the wrong one will yield disastrous consequences if misused.

I believe that AI is an essential interest to the country. I think that much more research needs to be done establishing a means of distinguishing human produced work from the AI facsimile intended to impersonate it. The best way to safeguard the future of AI is to prevent its misuse in the creation of copyright violating content, and to mandate that it not infringe copyright during its training. This creates a legally defensible harbor from which AI as an industry can further grow and mature.

I do not think that AI should ever be used in any circumstance involving decisions of policy, enforcement, or in any other function within the normal operation of the government to any degree. There is no means of achieving transparency or oversight while, at the same time, the demonstrations of its fallibility present themselves on a daily basis. AI used in this capacity would be a bad deal for America and its people.

There is a famous slide from a slide deck that IBM produced in 1979. In it was a slide discussing the ethics behind letting computers think and do for us. In it, it simply read "A computer can never be held accountable, therefore a computer must never make a management decision." This fact remains true now much as it was then.

I am an Eagle Scout; civics and community are both important to me. The concept of machines making decisions that impact the lives of humans beings is utterly abhorrent. It does not belong in a country Abraham Lincoln once literally said was "of the people, by the people, for the people". Do not allow this untested, unreliable technology to become the new replacement for government.
