## General Comment

Thus far the only interactions I've had with GEN AI have been quite bad.

I'm friends and colleagues with several working artists who are afraid their work will be stolen by AI training off them and from what I can tell, their fears are not unfounded. I've seen AI be used copy existing artistwork and or styles of popular artists. For all intents and purposes its just tracing their work with extra steps and a high price tag.

I also have economic concerns. AI seems like a money furnace. We keep putting more resources in but little progress has actually been made in the last 5 years. It's an interesting technology but all it has amounted to so far is computerized theft. I suspect it will go the way of NFT's in the next two years.

I don't think this is what the US government should be spending any money on AI at the moment. Given the current state of the economy and trade war, I believe that money is better put elsewhere.
