General Comment

- * I do not believe AI holds a place in the future of the US
- * AI steals from my livelihood as an American and profits off of theft
- * AI is overhyped and is fleecing the eyes of the American public.

Hello. I do not believe that this plan should move forward in any way, shape or form. AI that is utilizing technology to steal from artists and makers of media, among other things is entirely harmful to as a whole and has no place or future in the US.

This is not a way to stand up to China but to allow for profiteering off of other people's work, which wholly seems to go against what this country is purported to be built on in terms of values.

AI that steals from people's works has currently made my ability to make money utilizing my skillset difficult and has made it difficult to find work utilizing my skills. It will create more problems if allowed to continue with no regard for copyright protections.

Lastly, AI that is intentionally programmed to take from people and to automate away jobs at the expense of people's livelihoods is said to be some golden egg that will bring great fortune to many but it has really been an overhyped flash-in-the-pan that will simply result in greater grifting and fleecing of people's money and time. It is not built to last and is already becoming more costly to run as said by multiple companies
