

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-up58-owh2
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3431
Comment on FR Doc # 2025-02305

Submitter Information

Name: Ryan Derry

[REDACTED]

General Comment

Allowing Ai to steal works from millions of artist may seem beneficial but then it'll create a problem that'll be too hard too control in the future. That problem is misinformation as Ai will generate images that are entirely fake and having a million and more of these images will cause future generations to believe in false and made up images.

An example is typing "Baby peacock" into a image search like Google and many of images would be ai generated that depict a fake image of a baby peacock, causing them to think this is how baby peacocks look in real life.

As for 2d and graphic arts. It'll cause millions like me, A budding and hard working artist to lose their entire lively hood. Years of passion, work, and talent wasted. AI could make these "Arts" but since it doesn't understand emotion and lacks of direction of what a company envisions for the art they want to advertise, it'll generate multiple images that have the basic idea but never have the exact emotion and idea that graphic and many other artist could create for companies and society.
