General Comment

As things stand, generative AI is already negatively impact research. It has become harder than ever to reasonably search just for accurate images of animals, and AI works are already flooding of scientific journals is an active waste of time for all major publications, to the point where AI search tools are being made to combat the growing issue (Source: <https://www.nature.com/articles/d41586-022-04245-8>).

If we continue down this road and promote generative AI over scientific inquiry, we will further lose our standing as a world leader in research, and will actively harm our abilities in getting high quality research accepted.

On top of this, if you want to better protect small businesses, you want to stop generative AI, which is already cutting the jobs of writers and researchers and graphic designers and artists and more creatives across the world. We won't get fresh new ideas out of generative AI, we'll get remixes of the same, and the world will be less bright and less likely to raise income for it.

Please consider putting your efforts towards reducing the use of generative AI, not increasing it. Thank you for your time.
