

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-utky-hcjj
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3452

Comment on FR Doc # 2025-02305

Submitter Information

Name: Aaron Hey

Email: [REDACTED]

General Comment

AI has many useful implications for solving technological, medicinal, production, and even scientific problems. Generative AI, however, does not "solve" any issues when it comes to the artistic media. Ranging from 2D, 3D, digital, traditional, musical, cinematic, or web based, AI does not and cannot "solve" art. AI only copies what it knows, by stealing from the production of content creators. Any piece of media uploaded to the web that was created from hours of work by an artist becomes compromised when generative AI seizes hold of it. This not only hurts the artist by stealing all the work they just completed, but also makes their work easier to exploit. Companies and corporations will then use AI to replicate the work of other artists so they can turn a profit. This is theft, and infringement.

This technology has surpassed its purpose for solving problems to "creating" images that contain traces of stolen work. Making the images feel lifeless, oversaturated and detectably insincere. Artistic integrity and pay have been short changed in order to save a small profit.

Art is not made with the push of a button or a typing of a command. Art is an understanding and a skill.

Just like the fad with NFTs, Generative AI is doomed to fail. The technology is already cannibalizing itself with its own feeds and the public has caught on to its lies and lifelessness. Therefore making Generative AI a bad investment.
