General Comment

Removing the guard rails to keep AI in check will open up millions of Americans to being stolen from constantly, and the people of this country will be unable to stop big corporations from trampling their rights in favor of profit. People who's livelihood is based on their ability to freely create without worry of having their work used without permission will be in danger of financial ruin, because of having their private personal work violated by the scan of an AI, before being copied and reproduced by something that costs Google, OpenAI, and other companies nothing while taking away the opportunities of the American worker. Americans will be helpless to compete, because even at minimum wage and bellow it will be less expensive for companies to ignore hiring, and use these AI. Giving them the ability to be exempt from all copyright will only embolden this power further, and widen the net corporations have to suck away wages from Americans, and violate their creative rights. The growth and expansion of AI's abilities to go almost completely unregulated and unrestrained has no place in the future of this country, and will only lend itself to the quickened erosion of all protections in this country. Corporations like Google will not stop at the ability to do what they want free from the rules of what is and isn't ok to work with. They will abuse this power, and it will be the average American who pays when these companies turn the tables and the actual creators are the one being accused of stealing from big business, and their rampant uncontrolled AIs. The only reason there is the belief that AI is going to revolutionize the American way of life, is because these large corporations have forced the narrative. They want us to believe that they "need" this freedom from restriction, because it will keep AI from doing anything that will truly bring our nation into the future. But in actuality, it is just furthered greed by corporations to remove regulations and restrictions, so that they can use anything they wish to gain a profit, even if it's not their own work. Cutting out the worker and the middle man, leaving only those at the top to gain all the benefits of the creative process while wholesale demoting individual creativity. We will not be incentivized to grow as a society, if a computer can steal everything, mimic everything, make a cheap copy of the works of those who did try, and then teach people to accept it and be satisfied by it. There is far too much damage to be done to this country, and to American rights, by letting big AI tech companies have their way at every turn. There must be restrictions and control of some kind, to leave power in the hands of the American people, and American creators, where it rightfully belongs. I do not believe AI holds a place in the future of the US, and our law makers need to do the right thing here, and tell companies like Google and OpenAI no. They are absolutely in the wrong about "needing" to be free from copyright restriction, and they cannot be allowed to steal from hard working Americans like this.
