General Comment

While artificial intelligence has vast potential to affect the future, like all other technologies, without ethics that effect can only be negative, disastrous, and irreversible.

Generative AI in particular is not true intelligence. It is a tool of theft and greed wielded by parties bereft of intelligence and creativity of their own. Unfettered, genAI doesn't liberate art, it cannibalizes it, killing the very minds that it feeds on until only its own malformed mockery is left.

And as it devours the creativity, talent , and livelihood of others - including and certainly limited to countless US citizens - denying them no only the recognition they deserve but also the futures they work for, it devours an untenable amount of resources. The infrastructure needed to power genAI at the scale being spoken of is literally consuming the environment - including our country - in greed, draining our resources, power infrastructure, and habitat. Those who claim we are vulnerable without it are merely the latest in a long history of grifters and cheats who think only of lining their pockets with other people's money and have no compunction selling lies to do it - snake-oil salesmen who think they can leave town once they've gotten what they can or when things get bad.

Don't let them get away with it. Don't give them what they want.
